

Disease Review

Each review should address the following questions, should have 3 links/reviews to legitimate sources that you used and have 3 pictures. Save this file as a PDF and post it into your blog.

Disease Name: Chlamydia

Disease Origin and History: Chlamydia has been around for thousands of year. Not only do humans have it but also animals have gotten it. That is where the disease came from. Chlamydia has been around for centuries.

Describe the symptoms and what it might be like to have the disease: Chlamydia is a very hard disease to track. It is very hard for a person with Chlamydia to tell if they have it. Some symptoms of Chlamydia are abnormal vaginal discharges and a burning sensation while urinating.

Describe how the disease spreads among people: This disease is spread through sexual intercourse with an individual who has Chlamydia.

Describe the population that is most susceptible: Mainly females can catch the disease but males can get the disease just as fast, the difference between the two is it causes more damage to females.

Describe past efforts to fight the disease, why have these efforts been successful or unsuccessful: The disease can only be fought by couples having a long term relationship with them both being clear of the disease. Also latex condoms help to prevent the disease as well if they are used properly.

Describe the reasons why the disease has not been eradicated: The reason it hasn't been eradicated is due to the fact of individuals carrying the disease not getting themselves tested and having unprotected sex and thus passing on the disease.

Describe some programs that will prevent infection in the future: Going to classes where they show you how to find out if a person has Chlamydia. Or going to classes where they show you how to properly use a condom.

Please use at least one old and one new media site and use these forms to review them.

Title: Sex education must for teenagers	Source: News tonight	Date of Article: Aug 30 2011
Topic: Chlamydia		
List at least three issues/problems raised in the article- 1. 11 year old treated for sexual disease 2. How common it is now that teenagers are getting treated for sexual diseases. 3. Over 1000 16 year olds and under have some type of disease		
State the underlying problem or issue raised in the article- I believe that the main problem was the fact that how often hospitals or clinics get teenagers who have some type of sexual disease.		
List any or proposed solutions to the issues raised above- 1. Sex education classes to aware teens. 2. Show the side affects of unprotected sex. 3. Show how their reckless acts can have some serious consequences.		
Things you liked about the article? I liked how they gave information on how many teens now a days have sexual diseases.	Things that you would like to change about the article? Add a little but more on what teens can do to prevent these diseases.	

 Website Research Review

Date:	August 17 2011
Name of Web site	www.cdc.gov
URL Address	http://www.cdc.gov/std/chlamydia/stdfact-chlamydia.htm
Who runs the web site?	Government
Who pays for the web site?	Government
When was the website last updated?	August 17 2011
Is the web page useful or well designed? Why? Why not?	This website is very useful because it answers all questions that a person who is learning about Chlamydia might have. When I read this website it answered all the questions I had.
List 4 pieces of information the Web page gives you.	1. It answered what the disease is. 2. It answered why it is so common amongst people. 3.It does more damage to women

P.O.W.E.R.

What is the original source if any?	4.Very hard to tell if an individual has it.
How will you use the information for your project?	This information I can use to show my classmates the basic information about Chlamydia and what it basically is.
Date:	5-18-2010
Name of Web site	Web MD
URL Address	http://www.webmd.com/sexual-conditions/guide/chlamydia
Who runs the web site?	Medical doctors
Who pays for the web site?	Government, hospitals
When was the website last updated?	March 12 2010
Is the web page useful or well designed? Why? Why not?	This web page is designed very well because it was made to show individuals who have suspicions about themselves have Chlamydia or there partner having it. It lists all things that can happen to an individual with Chlamydia.
List 4 pieces of information the Web page gives you. What is the original source if any?	1. Signs of Chlamydia 2. Treatments for it 3.How Chlamydia is diagnosed 4.Side affects of not getting treated

P.O.W.E.R.

How will you use the information for your project?

With this information I can explain how an individual can tell if they have it, what they can do to fix it and what are the side affects if it is not treated.
